

# curve®

## Improved design

## Improved performance

Marley's Curve® leaf and debris diverter protects your water tank or stormwater system, improving water quality and reducing maintenance.

Water in,  
leaves out

### NEXT GENERATION SCREEN

New design significantly reduces splash off in heavy rainfall. Less than 1% water loss at 134 litres per minute.

### LOW MAINTENANCE

Self shedding screen and quick release upper body for access.

### ADDED DRIP EDGE

Reduces downpipe discolouration. Includes tab for easier screen removal.

### STREAMLINED DESIGN

A stylish choice for any dwelling.

### FITS MULTIPLE DOWNPIPE TYPES

Fits 80mm round uPVC and steel downpipe. Adaptors available for 65mm round uPVC downpipe.

### EASY INSTALL

Stick on installation template included. No glue required.

# curve®

With rising water usage and growing pressure on stormwater infrastructure, it is becoming increasingly important to remove leaves and debris from our rainwater.

Marley Curve® is a new era leaf diverter that combines sleek, sophisticated design with innovative filtering technology. Its unique screen draws rainwater in while preventing leaves and other debris from entering your water tank or stormwater system. By removing material that breaks down to form sediment, Curve® can reduce retention/detention system maintenance and improve overall performance.

The new design significantly reduces splash off in heavy rainfall with less than 1% water loss at 134 litres per minute. It also features an added drip edge to reduce any downpipe discolouration below the unit.

Curve® is designed and manufactured in New Zealand to fit Marley's RP80® 80mm round uPVC downpipe system. It also includes a removable adaptor to allow installation on 80mm steel downpipes. For installation on Marley's RP65® 65mm round uPVC downpipe, a special adaptor set is available separately.

Curve® comes with a template that sticks onto the downpipe to make positioning, cutting and installation simple. There's no glue required, and it is easy to maintain. Simply slide the top housing up the downpipe to remove the filter screen for periodic rinsing or to clear any blockages.
