K-LINE™ DUST SUPPRESSION PACK

Scalable and ready to use dust suppression systems, perfectly suited to any site.

Easy and simple installation. Roll out the coil of pipe and allow it to relax. Measure and cut 2 x 15m lengths of pipe and cut. Fit the 32mm fitting with the male camlock to the ends and connect to a water source.

If the spray from the sprinklers appears to be restricted or spraying too far, adjust the sprinklers to suit the application.

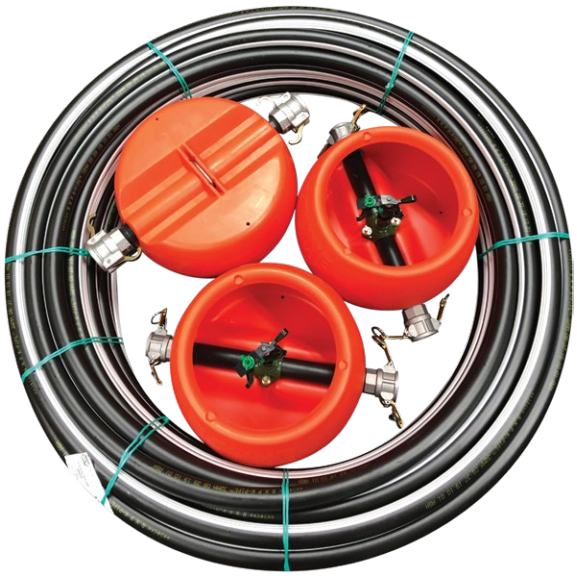
Product Specification - KLSS32.3DUST

The K-Line Dust Suppression pack contains everything an end user will require for fast, simple and quick assembly. The pod units are pre-assembled, only leaving the end user to cut 2 x 15m lengths of pipe with the supplied pipe cutter. Once cut, the connections have been designed with a combination of K-Line LD fittings and Camlocks for ease of assembly. The pack also contains a 32mm BSP nipple for a connection to a water source.

The end pod has been designed with a tow cap to connect the supplied tow rope to make moving the kit fast and easy.

Upscaling from a 3-pod system to a 6-pod system only requires removing the tow cap from the end pod and replacing it with a 32mm camlock to allow the connection of another 3 pod pack.



Pack Specification

Pipe: 66m K-Pipe
Sprinkler: NAAN 427 Adjustable
Accessories: K-Line LD Fittings, Pipe cutter, Tow cap and rope
Weight: 30kg

Product USP

- Ready to use and preassembled
